Investment strategy of the scheme	The scheme aims to generate stable returns by investing predominantly in debt & money market instruments. The scheme endeavors to generate optimum returns with low credit risk. Investment in debt & money market instruments issued by banks, treasury bills & government securities is primarily with the intention of maintaining high credit quality & liquidity. Atleast 70% of the net assets of the scheme shall be invested in securities rated AAA/A1+ and equivalent. The scheme shall not invest in securities rated below AA- or equivalent. The investment team of the AMC will carry out rigorous in depth credit evaluation of the money market & debt instruments proposed to be invested in.		The investment objective of this scheme is to maximize returns to the investor through an active management of the portfolio, by elongating the duration of the portfolio in a falling interest rate scenario and reducing the duration at a time when interest rates are moving up. With the discretion to take aggressive interest rate/duration risk calls, this could mean investing the entire net assets in long dated Government securities and debt instruments (carrying relatively higher interest rate risk/duration risk), or on defensive considerations, entirely in money market instruments. Accordingly, the interest rate risk/duration risk of the scheme may change substantially depending upon the Fund's call.

Investment strategy	The risk-return profile of this fund positions is in between a liquid fund and short duration income fund. The portfolio strategy seeks to increase yield by having a marginally higher maturity and moderately higher credit risk as compared to a liquid fund; whilst maintaining balance between safety and liquidity.		The Fund Manager will try to allocate the assets of the scheme in a diversified portfolio of various high quality Fixed Income Securities to achieve stable returns while having a low risk strategy. The fund manager will seek to look for investment opportunities with the same class of fixed income securities (e.g. government securities)	

Investment strategy (Contd.)	having different maturities (e.g. government securities having a residual maturity of 1 year and 2.5 years) or different classes of Fixed Income Securities with the same maturity profile/residual maturity. (e.g. a government security, an NBFC and a manufacturing corporate security having a residual maturity of 2 years).		
Risk profile of the scheme	<p>Mutual Fund units involve investment risks including the possible loss of principal. Please read the SID carefully for details on risk factors before investment.</p> <p>Scheme specific Risk Factors are summarized below:</p> <p>The scheme carries risks associated with investing in debt and money market securities, derivatives, Foreign Securities, securitized debt, short selling and securities lending.</p> <p>Investment in mutual fund units involves investment risks such as trading volumes, settlement risk, liquidity risk and default risk. Trading volume may restrict liquidity. The AMC may choose to invest in unlisted securities which may increase the risk on the portfolio. Also, the value of the Scheme investments may be affected by currency exchange rates, changes in law/policies of the government, taxation laws and political, economic or other developments.</p> <p>Investments in debt and money market instruments are subject to interest rate risk, re-investment risk, basis risk, credit risk, spread risk, prepayment risk, etc. Please refer to the SID for further details.</p>		
Risk management strategies	<p>Interest rate risk is managed by meticulous determination of average maturity (which is the expression for change in portfolio value for a basis point change in interest rate) of the portfolio. Extensive analysis of macro economic conditions is done to form a view on future interest rates and to position the portfolio accordingly. Credit risk is managed by in-depth analysis of issuer (financial/operating performance) with the help of internal and external research. Liquidity risk is addressed by maintaining exposure to cash/cash equivalents and highly liquid instruments.</p>	<p>Risk Management is an integral part of the investment process and adequate safeguards for controlling risks would be incorporated by the Asset Management Company (AMC) in the portfolio construction process. The following are the key risks associated with investments in fixed income securities and the manner the AMC would endeavor to address them</p> <p>Risk Involved</p> <p>Interest Rate Risk: Risk that a rise in interest rates will cause price of bonds to fall. In general, there is an inverse relationship between interest rates and bond prices so that when interest rates rise, bond price fall and vice versa.</p> <p>Risk Mitigant: The average modified duration of a portfolio is one of the means of measuring the interest rate risk of the portfolio. Higher is the modified duration, the fund stands exposed to a higher degree of interest rate risk. The Investment Review Committee (IRC) of the Asset Management Company would decide on the modified duration to be maintained for the portfolio at a particular point of time after taking into account the current scenario and the investment objective of the scheme. The portfolio duration will be decided after doing a thorough research on the general macroeconomic condition, political environment, systemic liquidity, inflationary expectations, corporate performance and other economic considerations.</p> <p>Credit Risk: Risk of default on payments by the issuer of a security</p> <p>Risk Mitigant: The credit analyst will make a detailed study of each of the issuers whose security will be bought by the fund. His analysis will include a study of the operating environment, past track record and short term/long term financial health of the issuer. The credit analyst will also take the help of data from external credit rating agencies like ICRA, CRISIL and Fitch during his analysis. The Credit Analyst will recommend the name of the issuers to the IRC who will be the final approving authority for including any issuer in the "target universe of issuers".</p> <p>Liquidity Risk</p> <p>Risk Mitigant: The Mutual Fund will maintain adequate cash/cash equivalent securities to manage the day to day redemptions of the fund. Attention would be given to the historic redemption trends while deciding on the cash equivalent component of the portfolio. Further, the scheme would also make investments only in high quality debt and money market instruments to mitigate the risk of illiquidity of the portfolio.</p> <p>The AMC would endeavor to identify & measure risks through various risk measurement tools like various risk ratios and analyze the same to be able to act in a preventive manner.</p>

7. Differentiation with existing open ended debt schemes of Axis Mutual Fund (as on May 31, 2014) (contd.)	Primary investment objective - Endeavor to generate stable returns with a low risk strategy while maintaining liquidity through a portfolio comprising of debt and money market instruments. However, there can be no assurance that the investment objective of the scheme will be achieved.	
	Investment strategy - The Fund Manager will try to allocate the assets of the scheme in a diversified portfolio of various high quality Fixed Income Securities to achieve stable returns while having a low risk strategy. The fund manager will seek to look for investment opportunities with the same class of fixed income securities (e.g. government securities) having different maturities (e.g. government securities having a residual maturity of 1 year and 2.5 years) or different classes of Fixed Income Securities with the same maturity profile/residual maturity. (e.g. a government security, an NBFC and a manufacturing corporate security having a residual maturity of 2 years).	
	Differentiation - Endeavor to maintain the modified duration in a range of 3 months to 3 years depending on the interest rate view.

	Primary investment objective - To provide optimal returns and liquidity to the investors by investing primarily in a mix of money market and short term debt instruments which results in a portfolio having marginally higher maturity as compared to a liquid fund at the same time maintaining a balance between safety and liquidity. However, there can be no assurance that the investment objective of the scheme will be achieved.	
	Investment strategy - The risk-return profile of this fund positions it in between a liquid fund and short duration income fund. The portfolio strategy seeks to increase yield by having a marginally higher maturity and moderately higher credit risk as compared to a liquid fund; whilst maintaining balance between safety and liquidity.	
	Differentiation - Endeavor to maintain the average maturity of up to 6 months depending on the interest rate view.

	Primary investment objective - To generate regular income through investments in debt & money market instruments, along with capital appreciation through limited exposure to equity and equity related instruments. It also aims to manage risk through active asset allocation.	
	Investment strategy - The Scheme has dual objectives of generating income and capital gains while attempting to manage the risk from the market. In order to achieve the twin objectives, the Scheme intends to follow a topdown and bottom-up investment strategy. The top-down process would lead to the asset-allocation between equities and fixed income and the bottom-up process would lead to construction of the portfolio using specific securities. The Scheme would invest both in equities and fixed income instruments. Allocation between the two asset classes will be done using a quantitative asset allocation methodology. This methodology will be the primary tool to manage the overall risk of the portfolio in such a way as to achieve the objective of managing risk. The quantitative tool has been simulated with a target of limiting the downside to 5% in a calendar year. Within equities and fixed income, the portfolio would be actively managed to optimize returns within the respective asset class.	
	Differentiation - Equity Exposure up to 35% of the net assets.

The fund manager will try to allocate assets of the scheme between various fixed income securities taking into consideration the prevailing interest rate scenario, the liquidity of the different instruments and maintain a diversified portfolio with the objective of achieving optimal risk adjusted returns.
